

### ABSTRACT

A method of minimizing contamination of processed grain and processed food products is disclosed. The method can include selecting seeds which are known to contain a desired variety, inspecting a grower's operation and machinery to certify that the operation is free of contamination prior to harvest, harvesting the crop, inspecting the processing facility to verify that its operation is free of contamination prior to harvest and processing the crop into processed grain or food products. The method is suitable for minimizing or preventing contamination of non-GMO processed grain by GMO seeds, or for minimizing or preventing contamination of GMO processed grain by non-GMO seeds.
